JR. EXPLORERS: Activities and Adventures for Kids

Did you know?
• There are over 400 different species of sharks
• Baby sharks are called pups
• Scientists can tell the age of a shark by counting the rings on its vertebrae
• Shark skeletons are made of cartilage and not bone, allowing them more flexibility
• Sharks are closely related to stingrays

Spot the Difference: There are five differences in these two pictures. Can you find and circle all five?
